Status of service development actions 1/2

Development proposal	Status	TSO comment
Make Portal announcement board clearer	Not started, planned for 2021	
Missing GetBaltic nominations	Done, confirmed nomination (NOMRES) is now visible in Portal	
Getting out data is for IT freaks - json formats etc	Done, created excel export possibility	
Possibility use different units (instead of kWh?)	Done, able to select also MWh in capacity and consumption data. Is it needed elsewhere?	Balance views and Invoicing: unit bigger font and little bit confused by thousand separot point.
Lack of graphical interface (capacity, current consumption)	Started, graphical views in invoice data, not yet elsewhere.	Quite easy to have for consumption, allocated delivers, capacity and balance position etc.
Slow to enter individual trades day by day, difficult to check them afterwards, difficult to view/correct incorrectly entered notifications for future	Has added filters to have nominations in front/UI. Is UI needed to make nomination to longer period – to be discussed? It is possible to use api endpoint as-is and just call it multiple times.	Plan is available Possible to have graph based on nomination of market party API versus UI Solution option are in backlog.
No visibility to how much is the network off balance	To be discussed	
Cannot see in real time total nominations and actual physical flows.	To be discussed	the data for each completed nomination cycle is transferred within the next hour (13:00 -14:00 →14:36)

Development proposal	Status	TSO comment
Added user status cannot be modified,	User data can be modified by user. Not sure about what is meaning "status".	
Transfer metering sites should have option "continuous"	An open-date relationship coud be set, e.g. to end 31.12.2043	Suggest to have date, because changes in the owner's relationship and delivery relationship must be handled in balance settlement cases.
Still some issues on reliability on the API interface	To be discussed	endpoint and time when problem occured
Gasgrid will organize a separate market design seminar on Finnish-Baltic market integration.	Done, event was held 8th Oct	
TSO to make it possible to deposit collateral on TSO's bank account	Not started, planned for 2021	
Collateral requirements of TSO are quite strict for capacity taking into account that the TSO invoices the long capacity products already in the beginning of the month	To be discussed	
could it be someday possible to make the final balance settlement quicker than 6 th day	Not started, to be discussed in retail market development forum
